

The Transfer Manager

The Transfer manager is used to manage the transfers between AS/400 buffers and PC buffers.

Access

To open the Transfer manager, you must either:

- Select the **Transfer** option from the [context-sensitive menu for buffers](#) in the Adelia Studio window.
- Double-click on a buffer icon in [the Adelia Studio window](#).

This option cannot be accessed from the context-sensitive menu for environments.

The Transfer manager is presented as a **wizard with several windows**.

The name of the PC buffer micro from which the transfer program was called is shown in the title bar. Once the AS/400 buffer has been selected, its name will also appear in the title bar.

Five windows cover the five stages in the procedure:

1. [Direction of transfer selection window](#).
2. [AS/400 connection parameter input window](#).
3. [AS/400 buffer selection window](#). This window will have either one or two tabs:
 - The [Buffers](#) tab: this tab displays a list of available buffers on the AS/400, enabling you to select the AS/400 buffer to or from which the data is to be transferred.

Important: Any AS/400 buffers that are not compatible with Adelia Studio transfers will not be included in this list.
 - The [Details](#) tab: this tab displays the contents of the selected AS/400 buffer, where the data is to be transferred from the AS/400 toward the PC.

Important: This list is for information only. You cannot select anything: all the objects in the list will be transferred.
4. [Temporary file and log selection window](#).
5. [Confirmation and transfer screen](#).
