

The Report Layout Manager

Warning: The Report Layout manager only applies to **batch** [ADELIA](#) and [VADELIA](#) programs.

This tool is used to create and modify the Adelia Studio reports with all the flexibility of a [graphical interface](#).

The Report layout manager is used to:

- place the various fields required on the report design, and define or modify these fields;
- enter the technical documentation and the user documentation of the report.

Note: If a user does not have the required authorities on the program called, the Report layout manager will be opened in [display mode](#); the user will only be able to consult the various dialog boxes without making any modification. The **Modify** button will become an **Enter** button.
