

# VADELIA and SADELIA-Type Programs

**Note:** These programs are sometimes referred as **Visual Adelia** programs (as opposed to standard **Adelia**, **Adelia Web** and **Adelia Mobile** programs).

You can generate genuine Windows graphical applications by designing **VADELIA** and **SADELIA** programs.

- By designing **VADELIA** programs, you can generate objects executable on the **client workstation**, possibly with processes executable on the **server workstation**.
- You can generate batch applications, which will only be executable on your **server workstation**, by designing **SADELIA**-type programs. These programs permit second generation **Client/Server accesses** to AS/400 or PC databases in either native or SQL mode.

*This solution is recommended for developing PC applications.*
