

Selecting a Debug Command

Access

To select a debug command, place the cursor on the "Debug" field in one of the following screens:

- [Debug a module](#), without entering a command name,
- [Display a long variable](#) (more than 144 characters),

then press **F4**.

Function keys

- F3** Return to previous screen.
- F12** Return to previous screen.
- Enter** Validate selection and display the corresponding prompt screen.
- Roll Up/Dn**

Data entry

Opt

- Option number of the function to be run.
- Option available:
 - 1 Select a debug command and open the relevant screen.

Note: You can also select debug commands by entering the HA#BREAK, HA#EVAL and HA#CLEAR commands directly.

Click below for further information on debug commands:

- [HA#BREAK](#)
- [HA#EVAL](#)
- [HA#CLEAR](#)
