Analyzing the Use of a Property or a Data Type

To analyze the use of a **conceptual property** in the logical properties, click the **Analyze** button of one of the following dialog boxes:

- Create/Modify an entity.
- Create/Modify a subtype entity.
- Properties of the entity 'XXX'.
- Repository - Properties.

Radio buttons

Sort criteria

Click the corresponding radio button to display the list sorted by the logical property name, the logical entity name or by the application area name.

Lists

Logical properties

List of logical properties. For each property, the following information is displayed: the name, the description, the name of the logical entity to which it is assigned, the application area to which it is attached (empty if it is not attached), and the origin (logical property created by reference to a conceptual property or resulting from the LDM generation).

Extended-selection list.

Buttons

Programs

This button opens a dialog box displaying the list of programs referring to the selected logical property.

This button is not active when no logical property is selected in the list.

Hold

Opens a dialog box used to hold the logical entities corresponding to the selected logical properties in the default correction.

This button is only visible in correction environments, and is only enabled if the user has a default correction.

Note: only objects attached to the current application area can be held.

Enter

This button closes the dialog box.

Keyboard shortcut: **Esc**.

Print all programs

This button prints the list of all the programs containing at least one reference to one of the logical properties referenced in the list.

Print list

This button prints all the logical properties in the list.
