

# The Adelia Studio Window

The window of Adelia Studio displays, as icons, the various [environments and buffers](#) already catalogued.

The window of Adelia Studio has following menus:

- the **General menu**, allowing management of the interface, environments and buffers, and corresponding to the popup menu by right clicking on the background of the window (away from any icon),
- the **Selection** menu, allowing management of the selected object, and giving access:
  - to the [context-sensitive menu for environments](#), when a single environment is selected,
  - to the [context-sensitive menu for environments](#), when a single buffer is selected,
  - to the **Uncatalog** option, when several environments or buffers are selected.
- the **Runtime Visual-Web menu**, for launching utilities related to Visual and Web Runtimes,
- the **Runtime iSeries menu** , to launch utilities related to the Runtime iSeries (for Adelia type programs generated in C language)
- the **Utilities menu** to launch other utilities,
- The **Help** menu, to access the product Help, the presentation of new features of the different versions and the [About Adelia Studio](#) box .

**Note:** the **Runtime iSeries** menu is not displayed by default. To display them, in the "HKEY\_LOCAL\_MACHINE\SOFTWARE\Hardis\Adelia\IWS" registry key (Windows 32 bit), create a value with the name "ShowIWSShortcuts", of DWORD type, and assign it the value "1".

Double clicking an environment icon opens the [Session Manager](#). If it is a newly created environment, the [environment configuration wizard](#) opens in the first place.
