

Environment Attributes

Access

To define the various parameters and information relative to the use of an environment, select the **Attributes** option from the **Administration** submenu, in the **context-sensitive menu for environments**.

The attributes of an environment are presented on several pages; some of them are split up into subpages:

- [AS-400](#),
- [Windows](#),
- [Mobile](#),
- [Cloud](#),
- [Web](#),
- [Java](#),
- [3GL generation](#),
- [Databases](#),
- [Print](#),
- [Miscellaneous](#),
- [Version](#),
- [Type](#),
- [Jira](#).

To modify one of these pages, click the corresponding tab (the browse arrows are used to display the different tabs).

Important: Only administrators can modify these pages.
