

The Configuration Wizard

Access

Adelia Configuration Wizard is displayed automatically from [the Adelia Studio window](#) when the user opens a newly-created environment for the first time.

This wizard helps the user to initialize the new environment's configuration.

Its use is not mandatory; nor is it essential to configure all of the options. It is always possible to access the environment's configuration later to change or add options, via the environment attributes.

The wizard is arranged over several pages:

- [Description](#)
- [Adelia Studio Option Selection Page](#)
- [Selecting the Databases to be Configured](#)
- [iSeries Database Settings](#)
- [BTrieve Database Settings](#)
- [SQL Database Settings](#)
- [Adelia iSeries Studio Generation Settings](#)
- [Visual or Web Client Selection](#)
- [Web Client Settings](#)
- [Windows or Java Client Settings](#)
- [Visual or Web Server Selection](#)
- [iSeries Server Part Generation Settings](#)
- [Windows or Java Server Settings](#)
- [Ending the Configuration Process](#)
