

Bug Manager (JIRA plugin)

Access

To access the bug manager, choose the Bug manager option in the session manager window.

This dialogue box offers the same management options as the [editor repository](#) but independently from it.

List

List of JIRA requests with the following information available for each request:

- name,
- summary,
- modification date,
- status,
- priority.

Filters

A drop-down list is available at the top of the JIRA request list allowing you to choose a filter. This filter is a selection criterion which limits the display of requests according to either a set of predefined filters or a custom filter configured by the user.

For more information, see the page [Using the filters](#).

Context-sensitive menu

The options offered by the context-sensitive menu depend on the user rights.

Create

Opens a dialog box allowing to create a new JIRA request.

This option is only available if the user has the CREATE_ISSUE right.

Display/Modify

Opens a dialog box allowing to display or to modify the data of the selected JIRA request.

The data can be changed only if the user has the EDIT_ISSUE right.

Web browser

Displays the request in the internet browser.

Delete

Allows to delete the selected requests.

This option is only available if the user has the DELETE_ISSUE right.

Change the priority

Opens a sub-menu allowing to define the priority of the selected requests.

This option is only available if the user has the EDIT_ISSUE right.

Refresh

Refreshes the data in the list.

The context-sensitive menu also offers the options allowing to [modify the status of a JIRA request](#).

These options are only available if the user has the RESOLVE_ISSUE right.

They vary depending on the current status of the request.

Example:

As for the JIRA default configuration, for a request in status "Open", the context-sensitive menu will contain the options "Process the request" and "Close the request".
